

How climate change could affect Grimsby and Humberside

Climate change changes grimsby and the humberside a lot . Because currently, our part of the UK is in danger of floods , but before climate change and global warming was a thing , floods were not even spoken about in the UK , since we would get none .

Climate change and global warming affected the humber bridge . Because a couple of years ago the water was bright blue , shimmering in the sunlight . Compared to now , it looks like literal sand , like you can walk on it .

No reflections , nothing .

Current affect of climate change

Climate change is currently happening and is making our heat levels go up more than usual .

This is shocking news , as neighbours and civilians are all asking about it .

How does this impact Grimsby (Humberside)?

This is building a future that we can already see - Days and days of thirst and dehydration . Since ice caps are melting , the usual water levels are unexpected , about until 2050 + , it is predicted that water will rise above , or too high for the humber bridge . Meaning that no one would be able to cross it again .

It would only be seen as a memory , I believe .

Pollution

Pollution has caused many serious allergen problems .

From sending people to hospitals , to killing them on sight . Pollen , for example, can be found in gardens with plants that produce pollen . Otherwise , it's no other than dangerous to others . It has affected many parts of England , like schools and public areas . Furthermore , that is why pollen can be so dangerous to many people around the world .

Future predictions

According to politicians , water levels are expected to rise higher than the Humber bridge by 2050 + .
By many far predictions , it is seen by scientists , that many disabilities will have medications and res

Climate change in Nigeria

Since Nigeria is 10 x hotter than England , we already knew how extreme the weather will be once climate change took over . Over 50 degrees and over per day , Nigeria does struggle . This country faces many problems . With that many floods over a year (approximately) 2 million people die . Environmental Problems ascended , and destruction took place . Tons , and tons of floods took place and it did not bring any good to Nigeria as they are still battling through climate change . Seeing how many things they suffer through , it really is not fair , is it ? Maybe if all of us worked together we would be able to stop climate and global warming .
